Why is the sky blue? What does DNA mean? How can planes fly? Why are boats floating? This series is dedicated to children (but not only) and answers 22 scientific questions.

The narrative choice is based on the lifestyle of the protagonist, Margot, a lonely old lady with unconventional passions, unwilling to show affection. But... beware, appearance is often misleading!

In addition to revealing the scientific reasons for certain natural phenomena, the 22 episodes are related by an intrigue that chronologically show us a "different" Margot.
